Sustainability initiatives

Coeman Packaging 2025

Product innovations towards plastic reductions

PCR & PIR films
with certifications

100% recycled
strapping

Thinner films with
high mechanical
properties

All PE-films are
100% recyclable

Committed to people

Career development
Training of our staff is key in supporting themselves and our customers

Health & safety at workplace
Risk prevention policies,
Investment in high-quality equipment

Diversity & inclusion
Multicultural team,
Well-balanced male – female on all levels

Partners
We do not work with suppliers, we work with partners

Environment

Water reduction

All water in our properties comes from our water-well

Energy reduction

Only LED lighting is used in our offices and warehouses. We make use of ALL OFF switches

Local sourcing

All our consumables are produced within the EU.

Transport

Double Materiality Analysis Report

August 2024

'In our commitment to sustainability, we adopt a dual materiality approach. We identify information as material when it has a significant impact on our economic, environmental and social performance and is critical to our stakeholders' decision-making. In addition, we closely monitor information that, although not material, is essential for compliance with laws and regulations and for maintaining transparency and trust among our stakeholders.'

Guided by Baker Tilly – according to frameworks ESRS (European sustainability reporting standards) and CSRD (Corporate sustainability reporting directive)
